

Installation Instructions for Hot Fix F90010

Windows for x64

F90010 is a "container" hot fix that contains the following "member" hot fixes that will update the software components as indicated. See the *Container Hot Fixes* section in the [Maintenance Install Tool \(MIT\) Usage Guide](#) for more information about container hot fixes.

G55008 for SAS Detail Data Store for Insurance 5.4_M1

F88010 for SAS Firmwide Risk Management for Insurance Server 2.1_M1

F89010 for SAS Market Risk Management for Insurance Server 2.1_M1

F03003 for SAS Risk Dimensions Server Component 5.3_M1

F12011 for SAS Risk Management for Insurance Server 2.1_M1

G54008 for SAS Risk Reporting Repository 1.4_M1

F92010 for SAS Underwriting Risk Management for Life Insurance Server 2.1_M1

F91010 for SAS Underwriting Risk Management for P&C Insurance Server 2.1_M1

G61008 for SAS Risk Management for Insurance Mid-Tier 2.1_M1

Before applying this hot fix, follow the instructions in [SAS Note 35968](#) to generate a SAS Deployment Registry report, and then verify that the appropriate product releases are installed on your system. The software components and release numbers should match the list of software components updated by the individual hot fix installers.

IMPORTANT NOTES

1. Files delivered in this hot fix will be backed up during the installation process. However, it is good general practice to back up your system before applying updates to software.
2. When applying this hot fix, *you MUST use the -silent and the -alwaysoverwrite* options. ANY customizations that may have been made to files included in the hot fix will be lost. The hot fix installer will automatically back up files for you. After the hot fix has been installed, use the backup copies to merge any of the customizations that you wish to retain. Links to manifests are provided in the section below to assist in determining which files will be overwritten.
3. Take backups of all .spk files prior to importing newer versions or making any updates to the contents of an existing .spk file. This can be done by first logging into the SAS Management Console (SMC) using the Administrator (sasadm) user, navigating to the appropriate folder containing metadata and exporting the folder contents to a uniquely named .spk file.
4. Configurations and related uncompiled macro files for the following reports will be updated in this install:

Stored Process (STP) names and descriptions have been updated in the metadata for a large majority of the reports to align with changes per CP 9 and CP 11 Final EIOPA templates. These updates can be applied to the system by importing reports.spk. Details of the import process are available in the section **Import updated .spk files**.

If you need to retain previous versions of these files, they can be retrieved from backup locations as needed.

5. As part of this install, support for XBRL reporting has been added. In order to support this feature, the following tables and columns have been added to the static directory:

Newly added tables:

XBRL_COMPLEXTYPE
 XBRL_COMPLEXTYPE_ENUMERATION
 XBRL_DIMENSION
 XBRL_FACTELEMENTS XBRL_FMT
 XBRL_REPORT
 XBRL_SCHEMA

Columns for the newly added tables:

6. You must have Administrator Privileges on your CLIENT or SERVER machine.
7. All currently active SAS sessions, daemons, spawners and servers must be terminated before applying this hot fix.
8. This hot fix should be installed using the same userid that performed the initial software installation.
9. On UNIX systems, you may need to adjust file permissions on all new and updated files to meet with your sites security guidelines.

INSTALLATION

This hot fix must be installed on each machine where the updated components of the product, listed above, are installed. The installation process will determine which components of **SAS Risk Management for Insurance 2.1_M1** are installed on each machine, and apply the appropriate updates.

If the updated components of this product are installed on multiple operating systems, you must download the hot fix for the appropriate operating system(s) and follow the installation instructions provided to complete the deployment of this hot fix.

The installer downloaded is ***F90010x6.exe***.

When downloading SAS 9.2 hot fix packages, you must choose to ***Save*** the hot fix to disk, and then execute the install from the saved location. Attempting to install a hot fix directly from the download page results in the error documented in [SAS Note 37104](#).

- To install this hot fix execute F90010x6.exe using the *-alwaysoverwrite* option.

This will initiate the installation wizard, which will guide you through the hot fix installation process.

Note: If your Windows operating system is Windows Vista, Windows 7 or Windows Server 2008, it may be necessary to install with the “Run as administrator” option. Within the Start menu’s Accessories folder, right-click the Command Prompt shortcut, and select “Run as Administrator” option. Next execute F90010x6.exe using the *-alwaysoverwrite* option.

See the [Maintenance Install Tool \(MIT\) Usage Guide](#) for more details on the installation of hot fixes.

The content of this hot fix is listed in the [hot fix manifest](#). This completes the installation of F90010. You must perform any "Post-Installation Instructions" documented below to successfully complete the deployment of this hot fix.

POST-INSTALLATION INSTRUCTIONS

For each product installed, click the link to be redirected to post-installation instructions.

3. If you already have existing DDS physical tables, execute the ddls of the tables that have undergone changes as mentioned in point 2 above from the `<SASHOME>\SASFoundation\9.2\insurancedd\sasmisc\insurancedds_5.4M1\ddl\sas` folder.
4. If you do not have existing DDS physical tables, execute the `ddlgen.sas` file present in `<SASHOME>\SASFoundation\9.2\insurancedds\sasmisc\insurancedds_5.4M1\ddl\sas` folder.
5. If you already have existing DDS physical tables, migrate data for those tables which are updated in this hot fix.

6. Copy the files present in
<SASHOME>\SASFoundation\9.2\insurancedds\sasmisc\insurancedds_5.4M1\metadata\
folder to a location that can be accessed by DI studio client.
7. Open DI studio and logon as unrestricted user.
8. If you have existing metadata for DDS, backup the same.
9. If you do not have existing metadata for DDS, import insurancedds_54m1_sas.spk
followed by insurancedds_54m1_hf1_sas.spk, insurancedds_54m1_hf2_sas.spk,
insurancedds_54m1_hf3_sas.spk, insurancedds_54m1_hf4_sas.spk, and
insurancedds_54m1_hf5_sas.spk, and insurancedds_54m1_hf6_sas.spk and
insurancedds_54m1_hf7_sas.spk, and insurancedds_54m1_hf8_sas.spk.

Note that before importing the insurancedds_54m1_hf2_sas.spk, please delete the table SCHEDULE_X_TREATY from the destination metadata server using DI Studio from the folder \Products\SAS Detail Data Store For Insurance\DDS5.4_M1\01] INSURANCE PRODUCT.

10. If you have existing metadata for DDS hot fix1, 2, 3, 4, 5, 6 and 7 on top of 5.4M1, import insurancedds_54m1_hf8_sas.spk.

Notes:

- a. Table ASSET_PORTFOLIO_SGMNT_X_EXPOSURE has been renamed to ASSET_SEGMENT_X_EXPOSURE. The data if existing in the original table needs to be migrated to the newly created table. Please note that the column ASSET_PORTFOLIO_X_EXPOSURE_RK in the original table is represented as ASSET_SEGMENT_X_EXPOSURE_RK in the new table.
- b. Once all hot fixes have been installed, execute the below code in DI Studio to delete the metadata for the physically removed tables/columns. The code below will synchronize table/column metadata as per physical table structures.

In DI Studio, start the code editor from “Tools” menu and execute below code with appropriate values of parameters:

```
Options metapass="<password for metadata user>"  
metaport=<port number>  
metaprotocol=bridge  
metarepository="foundation"  
metaserver="<metadata server>"  
metauser="<metadata user id>"
```

```
proc metalib;  
omr (library="Detail Data Store" rename="foundation");  
update_rule (delete);  
report;  
run;
```

For detailed instructions on creating physical table and importing metadata, please refer to *SAS® Detail Data Store for Insurance 5.4 Second Edition*.

Import updated .spk files:

1. Backup existing metadata.
2. Import delivered SPK files using SAS MC Import/Export SAS Package wizard

a. Import updated *analysis.spk* for Firmwide Risk Server 2.1

- i. Login to SAS Management Console (SMC) as the Administrator (sasadm) user
- ii. Click on the Folders tab
- iii. Navigate to the folder *Analysis* under System -> Applications -> SAS Risk Management for Insurance -> Firmwide Risk Server 2.1
- iv. Depending on whether or not F90009 is already installed, follow the steps in the appropriate section below followed by those in the **Common Steps** section to complete the import.
F90009 installed
 - v. Select the STP, BALANCE_SHEET, right-click and select Delete. Ensure that the STP is deleted from the Analysis folder.
 - vi. Right-click on the *Analysis* folder and select **Import SAS Package** from the menu
 - vii. Browse to
<SASHOME>\SASFoundation\9.2\rmifirmmva\sasmisc\Config\Deployment\Packages and select the analysis.spk file.
 - viii. Select the radio button for New Objects Only and click Next. You should see two new STPs, AVAILABLE_OWN_FUND and NLIFE_CAT_LOSS in the next window.
 - ix. Now, proceed with the **Common Steps** x. through xv.
F90009 not installed
 - v. Select all the STPs, right-click and select Delete. Ensure that all STPs have been deleted from the Analysis folder. The reason these STPs need to be deleted is that a parameter, RR_INPUTS has been added to most of the STPs. The parameter can be seen by expanding the System parameter group on the Parameters tab.

- vi. Next, right-click on the *Analysis* folder and select **Import SAS Package** from the menu
- vii. Browse to
<SASHOME>\SASFoundation\9.2\rmifirmmva\sasmisc\Config\Deployment\Packages and select the analysis.spk file.
- viii. Select the radio button for **All Objects** and click Next.
- ix. Now, proceed with the **Common Steps** x. through xv.

Common Steps

- x. You should see a list of STPs in the window. Click Next and then Next again.
- xi. Ensure that you have the correct mappings for the SAS Application Servers. Click Next.
- xii. On this screen, map source code repositories between original and target application servers. Choose the path to the
<SASHOME>\SASFoundation\9.2\rmifirmmva\sasstp folder. Click Next.
- xiii. Review the Summary information and click Next if correct. Otherwise, click on the Back buttons to make necessary corrections in earlier steps.
- xiv. The next screen should show that the import was completed. Click the View Log button and scan the log for any errors. If the import was successful, you should see messages such as “The import process completed successfully” in the log.
- xv. Click Ok and then Finish.

b. Import updated *analysis.spk* for Life Risk Server 2.1 (not required if F90009 already installed)

- i. Login to SAS Management Console (SMC) as the Administrator (sasadm) user
- ii. Click on the Folders tab
- iii. Navigate to the folder Analysis under System -> Applications -> SAS Risk Management for Insurance -> Life Risk Server 2.1
- iv. Select all the STPs, right-click and select Delete. Ensure that all STPs have been deleted from the Analysis folder. The reason these STPs need to be deleted is that a parameter, RR_INPUTS has been added to most of the STPs. The parameter can be seen by expanding the System parameter group on the Parameters tab. You should also see a new STP, SLTH_SOLVENCY if not already added in a prior hotfix install.
- v. Next, right-click on the Analysis folder and select Import SAS Package from the menu
- vi. Browse to
<SASHOME>\SASFoundation\9.2\rmilifemva\sasmisc\Config\Deployment\Packages and select the analysis.spk file.
- vii. Select the radio button for **All Objects** and click Next
- viii. You should see a list of STPs in the window. Click Next and then Next again.
- ix. Ensure that you have the correct mappings for the SAS Application Servers. Click Next.

- x. On this screen, map source code repositories between original and target application servers. Choose the path to the <SASHOME>\SASFoundation\9.2\rmilifemva\sasstp folder. Click Next.
 - xi. Review the Summary information and click Next if correct. Otherwise, click on the Back buttons to make necessary corrections in earlier steps.
 - xii. The next screen should show that the import was completed. Click the View Log button and scan the log for any errors. If the import was successful, you should see messages such as “The import process completed successfully” in the log.
 - xiii. Click Ok and then Finish.
- c. Import updated *analysis.spk* for Market Risk Server 2.1 (not required if F90009 already installed)**
- i. Login to SAS Management Console (SMC) as the Administrator (sasadm) user
 - ii. Click on the Folders tab
 - iii. Navigate to the folder Analysis under System -> Applications -> SAS Risk Management for Insurance -> Market Risk Server 2.1
 - iv. Select all the STPs, right-click and select Delete. Ensure that all STPs have been deleted from the Analysis folder. The reason these STPs need to be deleted is that a parameter, RR_INPUTS has been added to most of the STPs. The parameter can be seen by expanding the System parameter group on the Parameters tab.
 - v. Next, right-click on the Analysis folder and select Import SAS Package from the menu
 - vi. Browse to <SASHOME>\SASFoundation\9.2\rmimktmva\sasmisc\Config\Deployment\ Packages and select the analysis.spk file.
 - vii. Select the radio button for **All Objects** and click Next
 - viii. You should see a list of STPs in the window. Click Next and then Next again.
 - ix. Ensure that you have the correct mappings for the SAS Application Servers. Click Next.
 - x. On this screen, map source code repositories between original and target application servers. Choose the path to the <SASHOME>\SASFoundation\9.2\rmimktmva\sasstp folder. Click Next.
 - xi. Review the Summary information and click Next if correct. Otherwise, click on the Back buttons to make necessary corrections in earlier steps.
 - xii. The next screen should show that the import was completed. Click the View Log button and scan the log for any errors. If the import was successful, you should see messages such as “The import process completed successfully” in the log.
 - xiii. Click Ok and then Finish.
- d. Import updated *analysis.spk* for Property Casual Risk Server 2.1 (not required if F90009 already installed)**
- i. Login to SAS Management Console (SMC) as the Administrator (sasadm) user
 - ii. Click on the Folders tab
 - iii. Navigate to the folder Analysis under System -> Applications -> SAS Risk Management for Insurance -> Property Casual Risk Server 2.1

- iv. Select all the STPs, right-click and select Delete. Ensure that all STPs have been deleted from the Analysis folder. The reason these STPs need to be deleted is that a parameter, RR_INPUTS has been added to most of the STPs. The parameter can be seen by expanding the System parameter group on the Parameters tab. You should also see a new STP, NSLTH_SOLVENCY if not already added in a prior hotfix install.
- v. Next, right-click on the Analysis folder and select Import SAS Package from the menu.
- vi. Browse to
<SASHOME>\SASFoundation\9.2\rmipcmva\sasmisc\Config\Deployment\Packages and select the analysis.spk file.
- vii. Select the radio button for **All Objects** and click Next.
- viii. You should see a list of STPs in the window. Click Next and then Next again.
- ix. Ensure that you have the correct mappings for the SAS Application Servers. Click Next.
- x. On this screen, map source code repositories between original and target application servers. Choose the path to the
<SASHOME>\SASFoundation\9.2\rmipcmva\sasstp folder. Click Next.
- xi. Review the Summary information and click Next if correct. Otherwise, click on the Back buttons to make necessary corrections in earlier steps.
- xii. The next screen should show that the import was completed. Click the View Log button and scan the log for any errors. If the import was successful, you should see messages such as “The import process completed successfully” in the log.
- xiii. Click Ok and then Finish.

e. Import updated *reports.spk* for the RMI Common Server component

- i. Login to SAS Management Console (SMC) as the Administrator (sasadm) user
- ii. Click on the Folders tab
- iii. Navigate to the folder *Reports* under System -> Applications -> SAS Risk Management for Insurance -> Risk Management for Insurance Server 2.1
- iv. Select all the *Reports*, right-click and select Delete. Ensure that all *Reports* have been deleted from the Reports folder.
- v. Next, right-click on the Reports folder and select **Import SAS Package** from the menu
- vi. Browse to
<SASHOME>\SASFoundation\9.2\rmicomnsvr\sasmisc\Config\Deployment\Packages and select the *reports.spk* file.
- vii. Select the radio button for **All Objects** and click Next
- viii. You should see a list of *Reports* in the window. Click Next and then Next again.
- ix. Ensure that you have the correct mappings for the SAS Application Servers. Click Next.
- x. On this screen, map source code repositories between original and target application servers. Choose the path to the
<SASHOME>\SASFoundation\9.2\rmicomnsvr\sasstp folder. Click Next.

- xi. Review the Summary information and click Next if correct. Otherwise, click on the Back buttons to make necessary corrections in earlier steps.
- xii. The next screen should show that the import was completed. Click the View Log button and scan the log for any errors. If the import was successful, you should see a message such as "The import process completed successfully" in the log.
- xiii. Click Ok and then Finish.
- xiv. If required, selectively import metadata from the backup SPK (refer to Step 1) for only those QRTs that were customized earlier and are not delivered in the hot fix.

f. Import updated *system.spk* for the RMI Common Server component (not required if F90006 already installed)

- i. Click on the Folders tab
- ii. Navigate to the folder System under System -> Applications -> SAS Risk Management for Insurance -> Risk Management for Insurance Server 2.1
- iii. Right-click on the System folder and select Import SAS Package from the menu
- iv. Browse to
<SASHOME>\SASFoundation\9.2\rmicomnsvr\sasmisc\Config\Deployment\Packages and select the *system.spk* file.
- v. Select the radio button for **All Objects** and click Next
- vi. You should see a list of STPs in the window. Click Next and then Next again.
- vii. Ensure that you have the correct mappings for the SAS Application Servers. Click Next.
- viii. On this screen, map source code repositories between original and target application servers. Choose the path to the
<SASHOME>\SASFoundation\9.2\rmicomnsvr\sasstp folder. Click Next.
- ix. Review the Summary information and click Next if correct. Otherwise, click on the Back buttons to make necessary corrections in earlier steps.
- x. The next screen should show that the import was completed. Click the View Log button and scan the log for any errors. If the import was successful, you should see a message such as "The import process completed successfully" in the log.
- xi. Click Ok and then Finish.
- xii. You should now see
 - 1. A new "Job name" parameter in the Parameters tab for the REPORT_OPTIONS STP if you had not installed F90004 or F90005.
 - 2. A new parameter for XBRL generation.

g. Import updated *utilities.spk* for the RMI Common Server component

- i. Login to SAS Management Console (SMC) as the Administrator (sasadm) user
- ii. Click on the Folders tab

- iii. Navigate to the folder Utilities under System -> Applications -> SAS Risk Management for Insurance -> Risk Management for Insurance Server 2.1
- iv. Depending on which hotfix was last installed, follow the steps in the appropriate section below followed by those in the **Common Steps** section to complete the import.

F90007 installed

- v. Right-click on the Utilities folder and select **Import SAS Package** from the menu
- vi. Browse to
<SASHOME>\SASFoundation\9.2\rmicomnsvr\sasmisc\Config\Deployment\Packages and select the *utilities.spk* file.
- vii. Select the radio button for **New Objects Only** and click Next
- viii. You should see a new STP, **BSC1** in the window. Click Next and then Next again.
- ix. Now, proceed with the **Common Steps** x. through xv.

F90007 not installed but F90006 installed

- v. Right-click on the folder named **Data Management** and click Delete
- vi. Next, right-click on the Utilities folder and select **Import SAS Package** from the menu
- vii. Browse to
<SASHOME>\SASFoundation\9.2\rmicomnsvr\sasmisc\Config\Deployment\Packages and select the *utilities.spk* file.
- viii. Select the radio button for **All Objects** and click Next. You should see a list of STPs in the window. Click Next and then Next again.
- ix. Now, proceed with the Common Steps x. through xv.

F90006 not installed

- v. Select the STPs listed below, right-click and click delete
 - ACCOUNTING_MEASURES
 - RE_J1
 - RE_J2
 - RE_J3
 - TP_E4
 - TP_E6
 - TP_E7A
 - TP_E7B

The reason that these STPs need to be removed is to be able to consolidate them under a new **Data Management** folder (which will be installed from the *utilities.spk* files) and also because the .sas files they execute have been renamed.

- vi. Next, right-click on the Utilities folder and select **Import SAS Package** from the menu
- vii. Browse to
<SASHOME>\SASFoundation\9.2\rmicomnsvr\sasmisc\Config\Deployment\Packages and select the *utilities.spk* file.
- viii. Select the radio button for **All Objects** and click Next. You should see a list of STPs in the window. Click Next and then Next again.
- ix. Now, proceed with the **Common Steps** x. through xv.

Common Steps

- x. Ensure that you have the correct mappings for the SAS Application Servers. Click Next.
- xi. On this screen, map source code repositories between original and target application servers. Choose the path to the
<SASHOME>\SASFoundation\9.2\rmicomnsvr\sasstp folder. Click Next.
- xii. Review the Summary information and click Next if correct. Otherwise, click on the Back buttons to make necessary corrections in earlier steps.
- xiii. The next screen should show that the import was completed. Click the View Log button and scan the log for any errors. If the import was successful, you should see a message such as "The import process completed successfully" in the log:
- xiv. Click Ok and then Finish.
- xv. You should now see the following STPs in the Utilities folder in a new "Data Management" folder containing data management jobs:

- ACCOUNTING_MEASURES
- BSC1
- LOSS_TRIANGLE
- RE_J1
- RE_J2
- RE_J3
- TP_E4
- TP_E6
- TP_E7A
- TP_E7B

h. Import updated *rmi_etl_bridge_m1_hf11.spk* for the RMI Solution Data Mart (SDM) ETL jobs

- i. Following is the summary of the newly added and modified jobs in this hot fix:

Newly added jobs:

- RMI_INT_100_I_ACCOUNT_CREDIT_RISK_MITIGANT
- RMI_INT_100_I_CREDIT_FACILITY_CR_MITIGANT
- RMI_INT_100_I_EXPOSURE_CR_MITIGANT_RANK

- RMI_INT_100_I_FINANCIAL_POSITION_CR_MITIGANT
- RMI_INT_100_I_FRA_INSTRUMENT_LEG
- RMI_INT_100_I_RISK_FACTOR_X_RISK_FCTR_CURVE
- RMI_STG_210_EXPOSURE_CRM_LINK
- RMI_STG_210_GL_BAL_SEGMENT_ATTR_VAR
- RMI_STG_210_GL_BALANCE_SEGMENT
- RMI_STG_210_RATE_PARAM_GROUP_X_PARAMETER
- RMI_STG_210_RI_CONTRACT_COLLATERAL
- RMI_STG_210_SUB_LEDGER
- RMI_STG_210_ENTITY_SYSTEM_IDENTITY
- RMI_STG_210_LINE_OF_BUSINESS_ASSOC
- RMI_STG_230_CAPITAL_ALLOCATION
- RMI_STG_230_CAPITAL_COST

Modified Jobs:

- RMI_INT_100_I_ASSET_SGMNT_X_EXPOSURE
- RMI_INT_100_I_BOND_INSTRUMENT
- RMI_INT_100_I_COUNTERPARTY
- RMI_INT_100_I_CREDIT_CARD_ACCOUNT
- RMI_INT_100_I_CREDIT_FACILITY
- RMI_INT_100_I_EXTERNAL_ORG
- RMI_INT_100_I_FINANCIAL_INSTRUMENT
- RMI_INT_100_I_FINANCIAL_POSITION
- RMI_INT_100_I_FX_FORWARD_QUOTE
- RMI_INT_100_I_FX_VOLATILITY_QUOTE
- RMI_INT_100_I_INT_RATE_VOLATILITY_QUOTE
- RMI_INT_100_I_INTEREST_RATE_QUOTE
- RMI_INT_100_I_PHYSICAL_ASSET
- RMI_INT_100_I_RISK_FACTOR
- RMI_INT_100_I_RISK_FACTOR_X_RISK_FCTR_CURV
- RMI_INT_100_I_SWAP_INSTRUMENT_LEG
- RMI_INT_100_I_COUNTERPARTY_CREDIT_ASSESSMENT
- RMI_INT_105_I_FINANCIAL_ACCOUNT
- RMI_INT_110_I_ACCT_POS_INST_FCLTY_APPEND
- RMI_INT_110_I_QUOTE_VOLATILITY
- RMI_STG_210_CEDED_LOSS
- RMI_STG_210_CLAIM_HISTORY
- RMI_STG_210_COVERED_PERILS
- RMI_STG_210_FINANCIAL_FUND
- RMI_STG_210_RI_CARRIER_X_RI_CONTRACT_SECTN
- RMI_STG_210_FUND_INSTRUMENT
- RMI_STG_210_GENERAL_INSURANCE_SUBJECT
- RMI_STG_210_GENERAL_INSURANCE_UOE
- RMI_STG_210_GL_ACCOUNT_ASSOC
- RMI_STG_210_INSURANCE_SEGMENT

- RMI_STG_210_INSURED_ITEM_LOCATION
- RMI_STG_210_INTERNAL_ORG_ASSOC
- RMI_STG_210_LIFE_INSURANCE_POLICY
- RMI_STG_210_RI_CARRIER_X_XL_LAYER
- RMI_STG_210_SECURITIZATION_POOL_MART
- RMI_STG_210_SUB_LEDGER
- RMI_STG_210_XL_LAYER
- RMI_STG_230_ASSET_SGMNT_X_EXPOSURE
- RMI_STG_230_CDO_INSTRUMENT
- RMI_STG_230_CASHFLOW_ACCOUNT
- RMI_STG_230_CASHFLOW_FRA
- RMI_STG_230_CASHFLOW_INSTRUMENT
- RMI_STG_230_CONVERSION_SCHEDULE
- RMI_STG_230_CONVERTIBLE_BOND_INSTRUMENT
- RMI_STG_230_COUNTERPARTY
- RMI_STG_230_COUNTERPARTY_RATINGS
- RMI_STG_230_CREDIT_RISK_MITIGANT
- RMI_STG_230_DISCRETE_CARRYING_COST
- RMI_STG_230_EMBEDDED_OPTIONS
- RMI_STG_230_FINANCIAL_CONTRACT
- RMI_STG_230_FINANCIAL_CONTRACT_ISSUE
- RMI_STG_230_FINANCIAL_EXPOSURE
- RMI_STG_230_GL_ACCOUNT
- RMI_STG_230_OPTION_INSTRUMENT
- RMI_STG_230_OPTION_SCHEDULE
- RMI_STG_230_QUOTE_FX
- RMI_STG_230_QUOTE_INDEX
- RMI_STG_230_QUOTE_IR
- RMI_STG_230_QUOTE_IR
- RMI_STG_230_QUOTE_VOLATILITY
- RMI_STG_230_QUOTE_VOLATILITY
- RMI_STG_230_RF_CURVE_X_RF_GROUP
- RMI_STG_230_RISK_DRIVER
- RMI_STG_230_RISK_DRIVER_X_FIN_CONTR
- RMI_STG_230_RISK_FACTOR
- RMI_STG_230_RISK_FACTOR_CURVE
- RMI_STG_230_RISK_FACTOR_GROUP
- RMI_STG_230_RISK_FACTOR_X_RISK_FCTR_CURVE
- RMI_STG_230_SWAP_INSTRUMENT

Excluded Jobs: (due to deprecated SDM tables)

- RMI_STG_210_REINSURANCE_TREATY
- RMI_STG_210_COUNTERPARTY_X_RI_TREATY
- RMI_STG_210_CEDED_EXPOSURE
- RMI_STG_210_RATE_PARAM_GROUP

- ii. If you already have existing RMI21.M1 ETL jobs, import the *rmi_etl_bridge_m1_hf11.spk* file from <SASHOME>\SASFoundation\9.2\SASRiskManagementForInsuranceMidTier\2.1\ETL folder as explained below.

Note: If RMI21.M1 ETL is not existing then first import *rmi_etl_bridge.spk* from the same location.

- A. Login to SAS DI Studio as the Administrator (sasadm) user
- B. Click on the Folders tab
- C. Navigate to the folder Products
- D. Right-click on the Products folder and select Import SAS Package from the menu
- E. Browse to \SASRiskManagementForInsuranceMidTier\2.1\ETL and select the *rmi_etl_bridge_m1_hf11.spk* file.
- F. Select the radio button for All Objects and click Next.
- G. Select the objects to Import and click Next
- H. Click Next on 'About metadata connections' Screen
- I. Select the target libraries that correspond to original libraries. Click Next
- J. Select the target tables that correspond to original tables. Click Next.
- K. Ensure that you have the correct mappings for the SAS Application Servers. Click Next.
- L. Review the Summary information and click Next.
- M. The next screen should show that the import was completed. Click the View Log button and scan the log for any errors. If the import was successful, you should see a message such as "The import process completed successfully" in the log
- N. Click Ok and then Finish.
- O. Execute the below code in DI Studio to delete the metadata for physically removed tables\columns.

The code below will synchronize table\column metadata as per physical structures.

(Assumption: All DDLs for current hot fix have been executed.)

In DI Studio, start the code editor from "Tools" menu and execute below code with appropriate values of parameters.

```
Options metapass="<password for metadata user>"  
metaport=<port number>  
metaprotocol=bridge  
metarepository="foundation"  
metaserver="<metadata server>"  
metauser="<metadata user id>";
```

```

proc metalib;
omr (library="RMI Staging" rename="foundation");
update_rule (delete noadd);
report;
run;

```

3. If required, selectively import metadata from the backup SPK (refer to Step 1) for only those QRTs that were customized earlier and are not delivered in the hot fix.

Follow the steps below to regenerate the Solution Data Mart (SDM):

1. Locate the *create_solution_data_mart.sas* file in your install: in a typical install, the macro resides under `<SASHOME>\SASFoundation\9.2\rmicommsvr\sasmisc\solution_data_mart`
2. Open the *create_solution_data_mart.sas* file in a BASE SAS session on the installation server (where the SAS code resides)
3. Scroll to the bottom of the macro file and comment out the following line:

```

%create_solution_data_mart(
soln_data_mart_dir=&sysparm,
fca_c_lib_nm=FINCAD_Suite_32_2011,
fea_c_lib_nm=intrlib,
run_tps_fincad_flag=N,
run_tps_fea_flag=N );

```

4. Compile the macro in the SAS session by clicking the **Submit** button on the menu
5. After successful compilation, execute the following macro below:

```

%create_solution_data_mart(soln_data_mart_dir=<complete path to indata directory in your install>);

```

Example of indata path:

```

<CONFIGDIR>\AppData\SASRiskManagementForInsurance\2.1\indata

```

6. Check the SAS log for successful execution of the preceding macro. In addition, complete the following to recreate any shared entity data marts and user directories.
7. Delete all user folders found in `<SASCONFIG>\Lev1\AppData\SASRiskManagementForInsurance\2.1\data\userdata`
8. Login to **Risk Management for Insurance 2.1**
9. Select **File > Select Entity**, choose an entity from the list, and click **OK**.
10. Re-create the shared data mart for that entity.

Select **File > Manage Shared Data Mart** from the menu and click **Delete**, then click **Create** in the same **Manage Shared Data Mart** window.

11. Repeat steps 8 and 9 for each Entity.

G54008 for SAS Risk Reporting Repository 1.4_M1

Data model changes have been made to the SAS Risk Reporting Repository. You must update the structures of the private RRR location and Shared location.

There are different ways in which to apply the new structure. Please select one of the following methods that is applicable to your installation(s).

NB: In this release of the SAS Risk Reporting Repository previously marked deprecated tables and/or columns have been removed from the model. The files for these structures may still exist on your installation due to the delivery mechanism; however, code has been added to ignore the pre-existing files when necessary.

NB: If the post-installation tasks for F12006 have been applied, the structures of the Private locations will be automatically updated with the latest reportmart structure for the F120089 post-installation tasks and the subsequent methods are not necessary for applying the data model changes to private RRR locations. The following methods can be applied to both the private and shared locations depending on the state of your installation.

1. Updating via the provided sample data:

If a given reportmart location has not been updated by another process, creating the shipped reportmart sample data in a given location will install the data model changes.

The shipped sample data scripts already contain the updates in the RRR data model/formats. If you would like to utilize the shipped RMI sample data for the RRR without maintaining existing data, create the RRR sample data using the following steps.

Note: The sample data creation script does not depend on the version of the original RRR that is being overwritten. This script will overwrite the existing data and data model. For example, if you have the RRR 14 m1 version of the RRR and are installing the sixth RRR hotfix, by creating the shipped sample data you do not need to install the "sample data for the previous hotfix". The shipped sample data is a snapshot of the given version.

Submit the following code with your installation specific information. (Note: This has changed from previous releases as you are now required to submit the *rmiinit*; prior to submitting the batch program.)

```
options metauser="<username>" metapass="<password>" metaserver="<server_name>"  
metaport=<port_number> metarepository="Foundation";
```

```
%rmiinit;
```

```
%rmi_batch_create_rrr_sample_data(ENTITY=MAIN,USERNAME=<username>,SCOPE=P);
```

* If you need to install the reportmart sample data to the Global RRR with the sample data script, you must submit the following code with the additional information and changes:

```
%let rrr_user=<username>;
%let rrr_password=<Password>;

options metauser="<username>" metapass="<password>" metaserver="<server_name>"
metaport=<port_number> metarepository="Foundation";
%rmiinit;
%rmi_batch_create_rrr_sample_data(ENTITY=MAIN,USERNAME=<username>,SCOPE=S);
```

NOTE: It is not recommended that you use this process on the Global RRR unless you are absolutely certain of your specific installation needs. The script, as shown above, deletes the Global RRR and replaces the location with the new version of the RRR with the shipped sample data ONLY. All data in the Global location will be lost using this process.

2. Updating an existing install with alter/migration scripts:

If you have existing data in your reportmart and wish to only apply the data model changes, execute the specific alter scripts for your given installations:

A. If the reportmart is the RRR14m1 version: execute `%run_rrr14m1_to_rrr14m1hf8`. Follow the instructions to execute this alter script in the PDF document *m1rrr14_to_m1rrr14hf8_instructions.pdf* that has been delivered with the alter scripts. These files will be typically located in the following directory:

Win:

```
<SASHOME>\SASFoundation\9.2\rskrptmrtvrt\sasmisc\alterscripts\hotfix_8\m1_to_hotfix8
```

Unix:

```
<SASHOME>/SASFoundation/9.2/misc/rskrptmrtvrt/alterscripts/hotfix_8/m1_to_hotfix8
```

B. If the reportmart is the RRR14m1hf1 version: execute `%run_rrr14m1hf1_to_rrr14m1hf8`. Follow the instructions to execute this alter script in the PDF document *m1rrr14hf1_to_m1rrr14hf8_instructions.pdf* that has been delivered with the alter scripts. These files will be typically located in the following directory:

Win:

```
<SASHOME>\SASFoundation\9.2\rskrptmrtvrt\sasmisc\alterscripts\hotfix_8\hotfix1_to_hotfix8
```

Unix:

```
<SASHOME>/SASFoundation/9.2/misc/rskrptmrtvrt/alterscripts/hotfix_8/hotfix1_to_hotfix8
```

C. If the reportmart is the RRR14m1hf2 version: execute `%run_rrr14m1hf2_to_rrr14m1hf8`. Follow the instructions to execute this alter script in the PDF document *m1rrr14hf2_to_m1rrr14hf8_instructions.pdf* that has been delivered with the alter scripts. These files will be typically located in the following directory:

Win:

```
<SASHOME>\SASFoundation\9.2\rskrptmrtvrt\sasmisc\alterscripts\hotfix_8\hotfix2_to_hotfix8
```

Unix:

<SASHOME>/SASFoundation/9.2/misc/rskrptmrtvrt/alterscripts/hotfix_8/hotfix2_to_hotfix8

D. If the reportmart is the RRR14m1hf3 version: execute *%run_rrr14m1hf3_to_rrr14m1hf8*.

Follow the instructions to execute this alter script in the PDF document

m1rrr14hf3_to_m1rrr14hf8_instructions.pdf that has been delivered with the alter scripts. These files will be typically located in the following directory:

Win:

<SASHOME>\SASFoundation\9.2\rskrptmrtvrt\sasmisc\alterscripts\hotfix_8\hotfix3_to_hotfix8

Unix:

<SASHOME>/SASFoundation/9.2/misc/rskrptmrtvrt/alterscripts/hotfix_8/hotfix3_to_hotfix8

E. If the reportmart is the RRR14m1hf4 version: execute *%run_rrr14m1hf4_to_rrr14m1hf8*.

Follow the instructions to execute this alter script in the PDF document

m1rrr14hf4_to_m1rrr14hf8_instructions.pdf that has been delivered with the alter scripts. These files will be typically located in the following directory:

Win:

<SASHOME>\SASFoundation\9.2\rskrptmrtvrt\sasmisc\alterscripts\hotfix_8\hotfix4_to_hotfix8

Unix:

<SASHOME>/SASFoundation/9.2/misc/rskrptmrtvrt/alterscripts/hotfix_8/hotfix4_to_hotfix8

F. If the reportmart is the RRR14m1hf5 version: execute *%run_rrr14m1hf5_to_rrr14m1hf8*.

Follow the instructions to execute this alter script in the PDF document

m1rrr14hf5_to_m1rrr14hf8_instructions.pdf that has been delivered with the alter scripts. These files will be typically located in the following directory:

Win:

<SASHOME>\SASFoundation\9.2\rskrptmrtvrt\sasmisc\alterscripts\hotfix_8\hotfix5_to_hotfix8

Unix:

<SASHOME>/SASFoundation/9.2/misc/rskrptmrtvrt/alterscripts/hotfix_8/hotfix5_to_hotfix8

G. If the reportmart is the RRR14m1hf6 version: execute *%run_rrr14m1hf6_to_rrr14m1hf8*.

Follow the instructions to execute this alter script in the PDF document

m1rrr14hf6_to_m1rrr14hf8_instructions.pdf that has been delivered with the alter scripts. These files will be typically located in the following directory:

Win:

<SASHOME>\SASFoundation\9.2\rskrptmrtvrt\sasmisc\alterscripts\hotfix_8\hotfix6_to_hotfix8

Unix:

<SASHOME>/SASFoundation/9.2/misc/rskrptmrtvrt/alterscripts/hotfix_8\hotfix6_to_hotfix8

H. If the reportmart is the RRR14m1hf7 version: execute *%run_rrr14m1hf7_to_rrr14m1hf8*.

Follow the instructions to execute this alter script in the PDF document

m1rrr14hf7_to_m1rrr14hf8_instructions.pdf that has been delivered with the alter scripts. These files will be typically located in the following directory:

Win:

<SASHOME>\SASFoundation\9.2\rskrptmrtvrt\sasmisc\alterscripts\hotfix_8

Unix:

<SASHOME>/SASFoundation/9.2/misc/rskrptmrtvrt/alterscripts/hotfix_8

3. Installing a new reportmart using the *ddl/createrrr.sas* script:

If you would like to create a new RRR with the new data model, follow the instructions for installing a clear RRR in the **Installing and Configuring the SAS Risk Reporting Repository** section in the *SAS Risk Reporting Repository 1.4 Reference Guide, Second Edition*.

[F92010 for SAS Underwriting Risk Management for Life Insurance Server 2.1_M1](#)

NONE

[F91010 for SAS Underwriting Risk Management for P&C Insurance Server 2.1_M1](#)

NONE

[G61008 for SAS Risk Management for Insurance Mid-Tier 2.1_M1](#)

If both F90006 and F90007 have been previously installed, the following steps can be skipped in their entirety.

Re-build and Re-deploy Web Application

Proceed to **Step 3-C: Copy files into the application's deployed ear file** if F90006 has already been installed, otherwise start with **Step 1: Re-build Web Application**.

This hot fix requires that the Web Application be rebuilt and redeployed. Use the following steps to perform this post-installation task:

Step 1: Re-build Web Application

In order for this step to execute correctly, the Metadata Server must be running.

1.1 Invoke the SAS Deployment Manager 9.2

From the SASDeploymentManager directory launch *config.exe*.

SAS Deployment Manager is installed in the following default location:

<SASHOME>\SASDeploymentManager\9.2

1.2 Select a language in the *Choose Language* box

1.3 Select Rebuild Web Applications

1.4 Select Configuration Directory or Enter the Configuration Directory and Level that needs to be updated

1.5 Specify Connection Information, including the *sasadm* User ID and Password

1.6 Select ***Risk Management for Insurance*** as the Web Application to Rebuild

1.7 Verify the information on the Summary screen and select Start

1.8 Select Finish when the deployment is complete

This process will update the ***Risk Management for Insurance*** ear in
<SASCONFIGDIR>\Web\Staging.

A backup of the original ear file will be placed in the directory below:

<SASCONFIGDIR>\Web\Staging\Backup

Step 2: Re-deploy Web Applications

Re-deploy the web applications based on the instructions for the web application server you are using.

Step 3: Copy files into the application's deployed ear file

Copy files into your application server's deployed EAR for SAS Risk Management for Insurance as follows:

A. web.xml

From:

<SASHOME>\SASRiskManagementForInsuranceMidTier\2.1\Static\wars\sas.solutions.risk.rmi\WEB-INF\web.xml

To:

sas.solutions.risk.rmi.ear\sas.solutions.risk.rmi.war\WEB-INF\web.xml

B. app-config.xml

From:

<SASHOME>\SASRiskManagementForInsuranceMidTier\2.1\Static\wars\sas.solutions.risk.rmi\WEB-INF\spring-config\app-config.xml

To:

sas.solutions.risk.rmi.ear\sas.solutions.risk.rmi.war\WEB-INF\spring-config\app-config.xml

C. rmx-sas-code-bundles.xml

From:

<SASHOME>\SASRiskManagementForInsuranceMidTier\2.1\Static\wars\sas.solutions.risk.rmi\WEB-INF\spring-config\rmx-sas-code-bundles.xml

To: *sas.solutions.risk.rmi.ear\sas.solutions.risk.rmi.war\WEB-INF\spring-config\rmx-sas-code-bundles.xml*

Re-start the application (or the application server) using your application server's admin console.

Before accessing the web application, empty the Temporary Internet files location on the client machine used to access the web application from. This is a precautionary measure to avoid problems due to caching of older files in the internet browser.

This completes the installation of hot fix **F90010** on **Windows for x64**.
