

**SAS® Life Science Analytics Framework SAS Macro API 2.5  
Release Notes  
June 2021**

The SAS® Life Science Analytics Framework Macro API 2.5 is available for use with SAS® Life Science Analytics Framework Java API 2.5.

The tables below summarize the enhancements for this release.

Change Type	Description	Count
Added	New macro added in this release.	<b>56</b>
Updated	Macro name, input parameters, and/or returned results changed.	<b>25</b>
Deprecated	Replaced by new functionality. Marked for removal in future release.	<b>5</b>
Removed	Macro no longer available in this release.	<b>1</b>

Functional Area	Description
General	<p>Macro documentation: The documentation for the macros has been removed from the SAS® Macros installation file and is now available on the <a href="#">SAS® Help Center</a>.</p> <p>Operational issue: Delays have been noticed when changing the status of a process flow or process flow task. This may cause issues with the runs of subsequent macros that rely the state of a process flow or task. It is recommended that a sleep routine be added to your programs if this issue is encountered.</p>
Audit	<p>Updated:</p> <ul style="list-style-type: none"> <li>lsaf_getauditactions – Extended length of variable displayName</li> </ul>
Authentication	<p>Updated:</p> <ul style="list-style-type: none"> <li>lsaf_logout – Forced session logout to prevent session timeout.</li> </ul>
Autoflow	<p>The new AutoFlowService provides the macro to automatically create process flows from an auto flow source object such as a TLF. As of SAS® Life Science Analytics Framework 5.3, TLF is the only item from which process flows can be automatically created.</p> <ul style="list-style-type: none"> <li>lsaf_createautoflow</li> </ul>

Functional Area	Description
JobManifest	<p>Updated all macros in this service to:</p> <ul style="list-style-type: none"> <li>include a source location parameter to allow access to job manifests in both the workspace and repository.</li> <li>Standardized data sets to contain jobManifestLocation, jobManifestPath, jobManifestVersion variable. This involved variable renames in some of the data sets.</li> </ul> <p>Additional Update:</p> <ul style="list-style-type: none"> <li>lsaf_getjobmanifestinfo – Added variables recordType and recordSortOrder and changed default sort order of output data set.</li> </ul>
ProcessDefinition	<p>Added new macro:</p> <ul style="list-style-type: none"> <li>lsaf_getprocessdefelements</li> </ul> <p>Updated:</p> <ul style="list-style-type: none"> <li>lsaf_getallprocessdefinitions – Extended length and description of context variable.</li> <li>lsaf_getprocessdefsbytype - Extended length and description of context variable.</li> </ul>
ProcessDefinition Mapping	<p>The new ProcessDefinitionAutoflowService provides macros to support mapping process definition element attributes with TLF attributes in order to automatically create a process flow from a TLF. As of SAS® Life Science Analytics Framework 5.3, TLF is the only item from which process flows can be automatically created.</p> <ul style="list-style-type: none"> <li>lsaf_cleardefelementmappings</li> <li>lsaf_cleardefinitionmappings</li> <li>lsaf_defautoflowenabled</li> <li>lsaf_defmappingiscomplete</li> <li>lsaf_getdefinitionmappings</li> <li>lsaf_getdefsmappedforautoflow</li> <li>lsaf_setdefautoflowenabled</li> <li>lsaf_updatedefinitionmappings</li> </ul>
ProcessFlow	<p>Added:</p> <ul style="list-style-type: none"> <li>lsaf_getprocessflowsbyquery</li> </ul> <p>Updated:</p> <ul style="list-style-type: none"> <li>lsaf_getprocessflowsbyquery – added processFlowId to output data set.</li> <li>lsaf_getmyprocessflows – added processFlowId to output data set.</li> <li>lsaf_getprocessflowdata – Updated data of type DATE to be returned in DATETIME20. format.</li> <li>lsaf_getprocessflowproperties – added autoflowSource and autoflowType to output data set.</li> </ul> <p>Deprecated in 2.5; Marked for removal in future release.</p> <ul style="list-style-type: none"> <li>lsaf_getprocessflows - Replaced by lsaf_getprocessflowsbyquery</li> <li>lsaf_getmyprocessflows - Replaced by lsaf_getprocessflowsbyquery</li> </ul>
ProcessFlowTask Service	<p>Added:</p> <ul style="list-style-type: none"> <li>lsaf_assignpfusertask</li> <li>lsaf_claimpfusertask</li> <li>lsaf_clearpfusertaskcandidates</li> </ul>

Functional Area	Description
	<ul style="list-style-type: none"> <li>• lsaf_completeusertask</li> <li>• saf_getpftasksbyquery</li> <li>• lsaf_getpfusertaskcandidates</li> <li>• lsaf_getpfusertaskcompletiondata</li> <li>• lsaf_getpfusertaskhistory</li> <li>• lsaf_getpfusertaskproperties</li> <li>• lsaf_getpfusertaskstatus</li> <li>• lsaf_setpfusertaskcompletiondata</li> <li>• lsaf_startpfusertask</li> <li>• lsaf_updatepfusertaskcandidates</li> <li>• lsaf_updatepfusertaskproperties</li> </ul> <p>Updated:</p> <ul style="list-style-type: none"> <li>• lsaf_getcompleteddetails: Added variables taskId, elementCreatedSasFormat, elementCompletedSasFormat, and recordTypeSortOrder and changed default sort order of the output data set.</li> </ul>
Query	<p>Updated:</p> <ul style="list-style-type: none"> <li>• lsaf_querycontextmembership – allow lsaf_querydatasetquery parameter to be optional</li> <li>• lsaf_querydistcontextmembership – allow lsaf_querydatasetquery parameter to be optional</li> </ul>
Repository	<p>Added:</p> <ul style="list-style-type: none"> <li>• lsaf_deleteversion</li> </ul> <p>Updated:</p> <ul style="list-style-type: none"> <li>• lsaf_checkin – added parameter to allow versioning of new files.</li> </ul>
Resource Utilization	<p>The new ResourceUtilizationService provides macros to report the utilization information for the repository, workspace, and transient workspace.</p> <ul style="list-style-type: none"> <li>• lsaf_getadminreputilization</li> <li>• lsaf_getadmintransutilization</li> <li>• lsaf_getadminwsutilization</li> <li>• lsaf_getresourceutilization</li> <li>• lsaf_getuserreputilization</li> <li>• lsaf_getusertransutilization</li> <li>• lsaf_getusersrwsutilization</li> </ul>
Schedule	<p>Updated:</p> <ul style="list-style-type: none"> <li>• lsaf_getallschedules – fixed label for owner variable</li> <li>• lsaf_getmyschedules – fixed label for owner variable</li> </ul>
Session	<p>Deprecated in 2.4; Marked for removal in future release.</p> <ul style="list-style-type: none"> <li>• lsaf_getmysessions – replaced by lsaf_getsessionsbyquery</li> <li>• lsaf_getsessions – replaced by lsaf_getsessionsbyquery</li> <li>• lsaf_getusersessions – replaced by lsaf_getsessionsbyquery</li> </ul>

Functional Area	Description
	<p>Updated:</p> <ul style="list-style-type: none"> <li>• <code>lsaf_getsessionsbyquery</code> - Added <code>limitReached</code> value to log, fixed label for variable <code>clientId</code>.</li> </ul>
StudyTlf	<p>The new <code>StudyTlfService</code> provides macros to manage the tables, figures, and listings (TLFs) in a study.</p> <ul style="list-style-type: none"> <li>• <code>lsaf_deletestudytlf</code></li> <li>• <code>lsaf_getstudytlfstilesandfooters</code></li> <li>• <code>lsaf_getstudytlfanalysisresults</code></li> <li>• <code>lsaf_getstudytlfid</code></li> <li>• <code>lsaf_getstudytlfproperties</code></li> <li>• <code>lsaf_getstudytlfresultdatasets</code></li> <li>• <code>lsaf_getstudytlfsections</code></li> <li>• <code>lsaf_getstudytlfinfo</code></li> <li>• <code>lsaf_studytlfautoflowenabled</code></li> <li>• <code>lsaf_studytlfexists</code></li> <li>• <code>lsaf_updatestudytlfstilesfooters</code></li> <li>• <code>lsaf_updatestudytlfproperties</code></li> <li>• <code>lsaf_updatestudytlfproperty</code></li> </ul> <p>Note:</p> <p>The result identifier field for an analysis result is unique within a TLF, so it is possible to have multiple results with the same result identifier within a study that has multiple TLFs. Therefore, please be aware that the data set returned from the <code>lsaf_getstudytlfresultdatasets</code> macro may contain analysis data sets for more than one TLF result. This will be addressed in a future release.</p>
TlfTemplate	<p>The new <code>TlfTemplate</code> service provides macros to manage the global TLF templates.</p> <ul style="list-style-type: none"> <li>• <code>lsaf_createglobaltlftemplate</code></li> <li>• <code>lsaf_exportglobaltlfs</code></li> <li>• <code>lsaf_exportglobaltlfstoworkspace</code></li> <li>• <code>lsaf_getglobaltlftemplates</code></li> <li>• <code>lsaf_gettlftemplateid</code></li> <li>• <code>lsaf_importglobaltlfs</code></li> </ul>
User	<p>Removed deprecated macro:</p> <ul style="list-style-type: none"> <li>• <code>lsaf_updateuserinfo</code> – replaced by <code>lsaf_updateuserproperties</code> introduced in SAS Macros API 2.3.</li> </ul> <p>Updated:</p> <ul style="list-style-type: none"> <li>• <code>lsaf_userexists</code> – added value of <code>_lsafUserExists_</code> macro variable to the log.</li> </ul>
Workspace	<p>Added:</p> <ul style="list-style-type: none"> <li>• <code>lsaf_copyworkspaceitem</code></li> <li>• <code>lsaf_moveworkspaceitem</code></li> <li>• <code>lsaf_renameworkspaceitem</code></li> <li>• <code>lsaf_createworkspacefile</code></li> </ul>
