SAS® Life Science Analytics Framework API 2.6.1
Release Notes
October 2022

The SAS® Life Science Analytics Framework API 2.6.1 is available for use with SAS® Life Science Analytics Framework 5.4.x.

This release contains the following updates.

Update	Description

Audit Download	This release of the API contains a fix for returning audit records for file download actions. The following methods now return the correct download audit information:
	
	• AuditService
	   ○ search
	   ○ getSearchResults
	   ○ getAuditActions
	• AuditQueryService
	   ○ executeAuditEntryQuery
	   ○ executeAuditEntryDetailQuery

5.4.1 Clinical Flag	Starting with version 5.4.1, the SAS® Life Science Analytics Framework clinical functionality can be deactivated. The Java API methods associated with that functionality are still available but will fail with an unpredictable response if used when the clinical functionality is deactivated.
5.4.1 Compatability	Minor code changes were made to fix compile errors introduced in the 5.4.1 release of the SAS® Life Science Analytics Framework.
