Checklist A: “Backup of Customized SDD Files”

Note: This document is intended to assist an administrator in installing *SAS Drug Development (SDD) 4.3.2* from version *4.3.1 or 4.3*.

Prerequisites: All installation checklists for SDD 4.3 and 4.3.1 should have been completed prior to completing this checklist.

Checklist A: “Backup of Customized SDD Files”		Corresponding Document: <i>None</i>	
#	Activity	Expected Results	Actual Results
A1.	Login to an admin PC.	Windows display appears.	
A2.	Using the putty tool, create an ssh connection from the admin PC to the web server and login as webtrust . Make sure the Enable X11 forwarding option is not set. Setting this option causes the web application to crash occasionally.	You’re prompted for the password.	
A3.	Enter the webtrust <i>password</i> .	You’re logged into web server.	
A4.	Use the script command to capture commands that are typed in the Unix window. The syntax is script /var/staging_logs/<servername>_432upgrade.txt	System should indicate script has started.	
A5.	If any customizations were made to the SDD 4.3.1 web application, these files should be copied to another location on this server. Ex: cp /sfw/tcServer/sddserver1/webapps/sdd/WEB-INF/web.xml /sfw/sdd43_custom	Files are copied as a backup.	
A6.	Repeat steps A1 – A5 for any additional sddservers.	Steps repeated as necessary.	

Signature below indicates completion of Checklist A, items A1 – A6, above.
