

*SAS® Drug Development
Macros Build 46
Release Notes*

The SAS® Drug Development (SDD) macros are available for SDD 3.4 and subsequent 3.4_0X versions. They are not supported for any prior versions of SDD. Most of the information you'll need to take advantage of the macros can be found in the User Reference documentation. However, there are a few things to take note of, all of which are included in the table below.

Reference #	Title	Description
NA	Execute SDD Macros and the SDD Command Facility at the same time.	You may choose to run the macros and the Command Facility at the same time. However, development and technical support will only be provided for the macros. In the next minor release of SDD (3.5), the command facility will no longer be available or supported in any manner.
SDD_3055	Comma will cause problems in the SDD Macros.	If you have a comma (,) in file and folder names, the SAS Macros will not work. Please review your file and folder names to ensure they do not contain a comma.
