

INSTALLATION INSTRUCTIONS FOR HOT FIX 14JPS01 ON WINDOWS

The hot fix 14JPS01 addresses the issue(s) in 1.4 of SAS Foundation Services software on Windows as documented in the "Issue(s) Addressed" section of the hot fix download page:

<http://ftp.sas.com/techsup/download/hotfix/jps913.html#14jps01>

1. You must have SAS Foundation Services 1.4 installed on your system before applying this hot fix.
2. The hot fix must be installed using the same user-id who performed the initial SAS Foundation Services 1.4 installation.
3. You must have Administrator Privileges on your CLIENT or SERVER machine.
4. All currently active SAS sessions, daemons, spawners and servers must be terminated before applying this hot fix.

INSTALLING THIS HOT FIX

1. Technical Support strongly suggests that you back up the files being replaced by this hot fix. You should always try to include the current date in the name of the backup file created to distinguish between versions of backup files. By doing this you will maintain a history of the file, which will be helpful when multiple iterations of a hot fix have been applied to the same file.

For example,

```
cp sas.foo.jar sas.foo.jar.07012006
```

where 07012006 is the date when the hot fix is applied.

The .<date> extension MUST be appended AFTER the .jar extension as it appears above.

The files that should be backed up for this hot fix are listed in Step #3 below.

2. Launch the executable, which will initiate a Java install wizard and will guide you through the extraction of the updated components.
3. To verify the installation of the hot fix confirm that the file(s) in the location(s) below have been updated to the level indicated by the date provided:

```
<!SASHOME>\SASFoundationServices\1.1\jars\sas.svc.core.jar  
Date: 02/20/07 (EST)
```

Configuration and Deployment Instructions

After 14JPS01 is installed the following instructions should be performed for each SAS Web Application that is installed on your system.

Updating SAS Information Delivery Portal 9.1.3

1. Back up sas.svc.core.jar in the following locations per the instructions in #1 of the **INSTALLING THIS HOT FIX** section above:

```
<ISASHOME>\Web\Portal2.0.1\Portal\WEB-INF\lib\sas.svc.core.jar  
<ISASHOME>\Web\Portal2.0.1\SASServices\WEB-INF\lib\sas.svc.core.jar  
<ISASHOME>\Web\Portal2.0.1\SASPreferences\WEB-INF\lib\sas.svc.core.jar  
<ISASHOME>\Web\Portal2.0.1\SASStoredProcess\WEB-INF\lib\sas.svc.core.jar
```

2. Copy

```
<ISASHOME>\SASFoundationServices\1.1\jars\sas.svc.core.jar
```

installed by 14JPS01 to the following locations:

```
<ISASHOME>\Web\Portal2.0.1\Portal\WEB-INF\lib  
<ISASHOME>\Web\Portal2.0.1\SASServices\WEB-INF\lib  
<ISASHOME>\Web\Portal2.0.1\SASPreferences\WEB-INF\lib  
<ISASHOME>\Web\Portal2.0.1\SASStoredProcess\WEB-INF\lib
```

3. Stop the servlet container and the SAS Services application.
4. Run the **configure_wik.bat** utility to update the SAS Services application and create new Portal.war, SASStoredProcess.war, and SASPreferences.war files. You may find the configure_wik utility in

```
<ISASHOME>\Web\Portal2.0.1
```

5. Start the SAS Services application.
6. Redeploy the Portal.war, SASStoredProcess.war, and SASPreferences.war files to the servlet container on your portal Web application's Web server machine.
7. Start the servlet container.

Updating SAS Web OLAP Viewer 3.1

1. Back up

<ISASHOME>\SASWebOlapViewerforJava\3.1\SASWebOLAPViewer\WEB-INF\lib\sas.svc.core.jar

per the instructions in #1 of the **INSTALLING THIS HOT FIX** section above.

2. Copy

<ISASHOME>\SASFoundationServices\1.1\jars\sas.svc.core.jar

installed by 14JPS01 to

<ISASHOME>\SASWebOlapViewerforJava\3.1\SASWebOLAPViewer\WEB-INF\lib

3. Run the *configure.bat* file in

<ISASHOME>\SASWebOlapViewerforJava\3.1

to create a new war file for deployment.

4. Follow the steps in the

<ISASHOME>\SASWebOlapViewerforJava\3.1\config.doc

file for redeploying the war file.

Updating SAS Web Report Studio 3.1

1. Back up

<ISASHOME>\SASWebReportStudio\3.1\code\WEB-INF\lib\sas.svc.core.jar

per the instructions in #1 of the **INSTALLING THIS HOT FIX** section above.

2. Copy

<ISASHOME>\SASFoundationServices\1.1\jars\sas.svc.core.jar

installed by 14JPS01 to

<ISASHOME>\SASWebReportStudio\3.1\code\WEB-INF\lib

3. Configure and deploy SAS Web Report Studio by following the instructions for your operating system and web application server in the file

<ISASHOME>\SASWebReportStudio\3.1\deployment.html.

Note: If SAS Web Report Studio was originally installed using the SAS Configuration Wizard, there is a copy of the .war file in the <configuration-dir>\Lev1\web\webapps folder.

Also, if the application is configured for deployment in WebLogic, an additional directory containing an exploded copy of the SASWebReportStudio.war exists in the <configuration-dir>\Lev1\web\webapps\exploded folder. To maintain the same version of the .war file in all locations, it is recommended that you replace these files when reconfiguring this application.

4. Enable Report Web Services

If you previously deployed Report Web Services, you will need to re-deploy it. Please follow the instructions in the "Enable Report Web Services" section of the deployment.html document.

5. You must also complete the instructions in [Updating Query and Reporting Services 3.1](#) below.

Updating SAS Web Report Viewer 3.1

1. Back up

<ISASHOME>\SASWebReportViewer\3.1\code\WEB-INF\lib\sas.svc.core.jar

per the instructions in #1 of the **INSTALLING THIS HOT FIX** section above.

2. Copy

<ISASHOME>\SASFoundationServices\1.1\jars\sas.svc.core.jar

installed by 14JPS01 to

<ISASHOME>\SASWebReportViewer\3.1\code\WEB-INF\lib

3. Configure and deploy SAS Web Report Viewer by following the instructions for your operating system and web application server in the file

<ISASHOME>\SASWebReportViewer\3.1\deployment.html.

Note: If SAS Web Report Viewer was originally installed using the SAS Configuration Wizard, there is a copy of the .war file in the <configuration-dir>\Lev1\web\webapps folder.

Also, if the application is configured for deployment in WebLogic, an additional directory containing an exploded copy of the SASWebReportViewer.war exists in the <configuration-dir>\Lev1\web\webapps\exploded folder. To maintain the

same version of the .war file in all locations, it is recommended that you replace these files when reconfiguring this application.

4. You must also complete the instructions in Updating Query and Reporting Services 3.1 below.

Updating Query and Reporting Services 3.1

(These instructions must be run when updating SAS Web Report Studio or SAS Web Report Viewer)

1. Back up

<ISASHOME>\SASQueryandReportingServices\3.1\sas.svc.core.jar

per the instructions in #1 of the **INSTALLING THIS HOT FIX** section above.

2. Copy

<ISASHOME>\SASFoundationServices\1.1\jars\sas.svc.core.jar

installed by 14JPS01 to

<ISASHOME>\SASQueryandReportingServices\3.1

This completes the installation of hotfix 14JPS01.
