

# **INSTALLATION INSTRUCTIONS FOR HOT FIX 32ROM603 ON WINDOWS**

## **BEFORE DOWNLOADING:**

The hot fix 32ROM603 addresses the issue(s) in 3.2 of SAS Merchandise Intelligence software on WINDOWS as documented in following issue:

<http://tsdsrv05.unx.sas.com:7777/iw/docs/sasnotes/fusion/42/714.html>

## **IMPORTANT NOTE(S):**

1. You must have SAS Merchandise Intelligence 3.2 installed on your system and hot fix 32RO06 must already be applied before applying this hot fix.
2. You must deploy the hot fix in the following timeframe
  - a. after your weekly activity has completed
  - b. before the weekly ETL and back-end job
3. The hotfix must be installed using the same userid that performed the initial SAS Merchandise Intelligence 3.2 installation.
4. You must have Administrator Privileges on your CLIENT or SERVER machine.
5. All currently active SAS sessions, daemons, spawners and servers must be terminated before applying this hot fix.

## **INSTALLING THIS HOT FIX:**

1. Technical Support strongly suggests that you back up the files being replaced by this hot fix. You should always try to include the current date in the name of the backup file created to distinguish between versions of backup files. By doing this you will maintain a history of the file, which will be helpful when multiple iterations of a hot fix have been applied to the same file.

\*\*\* IMPORTANT NOTE: For the jar files, these backups must be created in a directory other than the directory that the original file resides in.

For example, copy the file

```
c:\foo\sas.foo.dll  
to  
c:\foo_backup\sas.foo.dll.04132011
```

Where 04132011 is the date when the hot fix is applied.

The .<date> extension MUST be appended AFTER the .dll extension as it appears above.

These instructions assume that SAS Merchandise Intelligence has been installed in the default locations

C:\Program Files\SAS\SASMerchandiseIntelligence

The hot fix package downloaded is a self extracting executable named 32ROM603wn.exe. Launching the executable will initiate the install wizard, which will guide you through the setup process.

The following files will be installed:

sasmdo.dll

the replacement module containing the hot fix

**This completes the installation of hot fix 32ROM603 on WINDOWS.**
