INSTALLATION INSTRUCTIONS FOR HOT FIX 41WARNTY04 ON HPUX FOR ITANIUM

BEFORE DOWNLOADING:

The hot fix 41WARNTY04 addresses the issue(s) in 4.1 of SAS Warranty Analysis software on HPUX for Itanium as documented in the "Issue(s) Addressed" section of the hot fix download page:

  http://ftp.sas.com/techsup/download/hotfix/warnty41.html#41WARNTY04

IMPORTANT NOTE(S):

1. You must have SAS Warranty Analysis 4.1 installed on your system and hot fix 41warnty02 must already be applied before applying this hot fix.

2. The hotfix must be installed using the same userid that performed the initial SAS Warranty Analysis 4.1 installation.

3. You must have Administrator Privileges on your CLIENT or SERVER machine.

4. All currently active SAS sessions, daemons, spawners and servers must be terminated before applying this hot fix.

INSTALLING THIS HOT FIX:

1. Technical Support strongly suggests that you back up the files being replaced by this hot fix. You should always try to include the current date in the name of the backup file created to distinguish between versions of backup files. By doing this you will maintain a history of the file, which will be helpful when multiple iterations of a hot fix have been applied to the same file.

For example,

   cp sas.foo.jar sas.foo.jar.09142009

where 09142009 is the date when the hot fix is applied.
The .<date> extension MUST be appended AFTER the .jar extension as it appears above.
The files that should be backed up for this hot fix are listed in Step #4 of installation instruction of 41wrtyanlmid01hx.tar.

2. Extract 41warnty04hx.tar into a temporary directory. For example,

        > cd /tmp
        > tar -xf $HOME/41warnty04hx.tar

where $HOME is the location of the downloaded tar file.

This extracts four components of this hot fix into /tmp/41warnty04hx. The four components extracted are:

> 41wrtyanlap04hx.tar
> contains updates to the SAS Warranty Analysis for Analytics Platform on H6I
>
> 41wrtyanlmid04hx.tar
> contains updates to the SAS Warranty Analysis Mid-Tier on H6I
>
> 41wrtyanlclnt04wn.exe
> contains updates to the SAS Warranty Analysis client on WIN
>
> 41wrtyanlmva04hx.tar.Z
> contains updates to the SAS Warranty Analysis Server on H6I

Use the instructions below to apply the individual components that apply to your system.

Updating Analytics Platform Tier.

Installing 41wrtyanlap04hx.tar:

The Analytics Platform component of the hot fix package is a tar file named 41wrtyanlap04hx.tar. 41wrtyanlap04hx.tar should be copied to and installed on the machine which is running SAS Analytics Platform.

41wrtyanlap04hx.tar Java installation file containing replacement or new files below:

> sas.analytics.mfg.warranty.core.jar
> sas.analytics.mfg.warranty.core.client_4.1.0.jar
> sas.analytics.mfg.warranty.core.smartobj.jar

Execute these steps on the machine which is running SAS Analytics Platform.

1. Extract the contents of 41wrtyanlap04hx.tar into a temporary directory, for example /tmp/41warnty04hx.

> $> mkdir /tmp/41warnty04hx
> $> cd /tmp/41warnty04hx
> $> tar -xf ./41wrtyanlap04hx.tar

The tar command will extract the following files to the temporary directory:

> h6i/Setup_HPUX_IA64
> h6i/media.inf
> h6i/setup.jar

2. Verify that Setup_HPUX_IA64 has execute permission. If it does not, use the 'chmod' command to make it executable:

```
$> cd /tmp/41warnty04hx/h6i
$> chmod 755 Setup_HPUX_IA64
```

3. Initiate the installation wizard

```
$>  export DISPLAY=<nodename>:0          <==== set your display
$>  cd /tmp/41warnty04hx/h6i
$>  ./Setup_HPUX_IA64
```

This will initiate the Java install wizard. Follow the prompts to complete the installation.

NOTE: During 41wrtyanlap04hx.tar installation with –*console* option, you may see the following error:

ServiceException: (error code = 200; message = "ERROR: could not read property value for bean getAPLocationbecause the following error occurred: java.lang.NullPointerException/apps/SASWarrantyAnalysis/lib/sas.analytics.mfg.warranty.core.client_4.1.0.jar (A file or directory in the path name does not exist.)"; severity = 0; exception = [java.io.FileNotFoundException: ERROR: could not read property value for bean getAPLocationbecause the following error occurred: java.lang.NullPointerException/apps/SASWarrantyAnalysis/lib/sas.analytics.mfg.warranty.core.client_4.1.0.jar (A file or directory in the path name does not exist.)])

This is a known issue and can be ignored. This issue will not impact the installation of the hot fix.

4. To verify the installation of the hot fix confirm that the file(s) in the location(s) below have been updated to the level indicated by the date provided:

To verify the installation of the hot fix confirm that the following file(s):
        sas.analytics.mfg.warranty.core.smartobj.jar

has been added in following locations indicated by the date provided:
        <!SASHOME>/SASAPCore/apps/SASWarrantyAnalysis/lib
        Date: 05/11/09 (EST)

To verify the installation of the hot fix confirm that the following file(s):
        sas.analytics.mfg.warranty.core.client_4.1.0.jar
        sas.analytics.mfg.warranty.core.jar

have been added in following locations indicated by the date provided:
        <!SASHOME>/SASAPCore/apps/SASWarrantyAnalysis/lib
        Date: 09/10/09 (EST)

Analytics Platform Tier Post-Installation Instructions:

After you have installed 41wrtyanlap04hx.tar and verified the above files in respective directories please go through the manual steps mentioned below:

1. Copy
   <!SASHOME>/SASAPCore/apps/SASWarrantyAnalysis/lib/sas.analytics.mfg.warranty.core
   .client_4.1.0.jar to <!SASHOME>/SASAPCore/lib

2. Copy
   <!SASHOME>/SASAPCore/apps/SASWarrantyAnalysis/lib/sas.analytics.mfg.warranty.core
   .smartobj.jar to <!SASHOME>/SASAPCore/lib

Modify app.config for performance improvements as follows:

1. Edit !SASInstall\SAS\SASAPCore\apps\SASWarrantyAnalysis\app.config

2. At the bottom of the file add:
   a) midTier.dataCacheLocation=<Path_to_directory_for_storing_SWACache>
      for example, midTier.dataCacheLocation=C:/SWACache/
   b) (Optional) Setup this property if you don't want the default value of 5 days
      midTier.dataCache.deleteAfterNDays=<Number_of_days>
      for example, midTier.dataCache.deleteAfterNDays=10
   c) Make sure that logging.xml is false to turn off analysis option retrieval
      logging.

NOTE: You have to restart Analytics Platform for the above modifications to take effect.

Updating Mid Tier:

Installing 41wrtyanlmid04hx.tar:

The Server component of the hot fix package is a tar file named 41wrtyanlmid04hx.tar. 41wrtyanlmid04hx.tar should be copied to and installed on all SAS Warranty Analysis Mid-Tier Server machine.

41wrtyanlmid04hx.tar Java installation file containing following files below:
   sas.analytics.mfg.warranty.webapp.jar
   sas.analytics.mfg.warranty.app_4.1.0.jar
   sas.analytics.mfg.warranty.core.client_4.1.0.jar
   org.eclipse.equinox.launcher_1.0.0.v20080924.jar
   JavaConf.xml
   SWA_Eclipse_RCP.jnlp.orig
   Eclipse_Signed_Extensions.jnlp.orig

Execute these steps on the SAS Warranty Analysis Mid-Tier Server machine..

1. Extract the contents of 41wrtyanlmid04hx.tar into a temporary directory, for example /tmp/41warnty04hx.

```
$> mkdir /tmp/41warnty04hx
$> cd /tmp/41warnty04hx
$> tar -xf  ./41wrtyanlmid01hx.tar
```

The tar command will extract the following files to the temporary directory:

```
h6i/Setup_HPUX_IA64
h6i/media.inf
h6i/setup.jar
```

2. Verify that Setup_HPUX_IA64 has execute permission. If it does not, use the 'chmod' command to make it executable:
```
$> cd /tmp/41warnty04hx/h6i
$> chmod 755 Setup_HPUX_IA64
```

3. Initiate the installation wizard

```
$>  export DISPLAY=<nodename>:0          <==== set your display
$> cd /tmp/41warnty04hx/h6i
$> ./Setup_HPUX_IA64
```

This will initiate the Java install wizard. Follow the prompts to complete the installation.

4. To verify the installation of the hot fix confirm that the following file(s):
```
sas.analytics.mfg.warranty.app_4.1.0.jar
sas.analytics.mfg.warranty.core.client_4.1.0.jar
```

have been added in following locations indicated by the date provided:
<!SASHOME>/SASWarrantyAnalysis/4.1/MidTier/WebApp/SASWarrantyAnalysis/plugins
Date: 09/10/09 (EST)

The following file(s):
```
org.eclipse.equinox.launcher_1.0.0.v20080924.jar
```

has been added in following locations indicated by the date provided:
<!SASHOME>/SASWarrantyAnalysis/4.1/MidTier/WebApp/SASWarrantyAnalysis/plugins
Date: 04/21/09 (EST)

The following file(s):
        sas.analytics.mfg.warranty.webapp.jar

has been added in following locations indicated by the date provided:
<!SASHOME>/SASWarrantyAnalysis/4.1/MidTier/WebApp
       Date: 09/10/09 (EST)

The following file(s):
        sas.analytics.mfg.warranty.webapp.jar
        sas.analytics.mfg.warranty.core.client_4.1.0.jar

have been added in following locations indicated by the date provided:
<!SASHOME>/SASWarrantyAnalysis/4.1/MidTier/WebApp/SASWarrantyAnalysis/WEB-INF/lib
       Date: 09/10/09 (EST)

The following file(s):
        JavaConf.xml

has been added in following locations indicated by the date provided:
<!SASHOME>/SASWarrantyAnalysis/4.1/MidTier/SystemAssembly
       Date: 05/20/09 (EST)

The following file(s):
        SWA_Eclipse_RCP.jnlp.orig
        Eclipse_Signed_Extensions.jnlp.orig

have been added in following locations indicated by the date provided:
<!SASHOME>/SASWarrantyAnalysis/4.1/MidTier/WebApp/SASWarrantyAnalysis/jnlp
       Date: 05/20/09 (EST)

Mid Tier Post-Installation Instructions:

After you have installed 41wrtyanlmid04hx.tar and verified the above files in respective directories please go through the manual steps mentioned below:

1. Backup <!SASCONFIG>/Lev1/web/webapps/SASWarrantyAnalysis.war i.e., rename the file to SASWarrantyAnalysis.war.01062009, where 01062009 is the date when the hot fix is applied.

2. Run
    <!SASHOME>/SASWarrantyAnalysis/4.1/MidTier/SystemAssembly/assembleWarFile.sh
    This will create a new SASWarrantyAnalysis.war in <!SASCONFIG>/Lev1/web/webapps

3. Deploy the newly created SASWarrantyAnalysis.war in your application server.
    Note: Before deploying the newly created SASWarrantyAnalysis.war, ensure that you have removed the previously deployed SASWarrantyAnalysis application from your application server. Also ensure that the application server cache is cleared. Please refer to the instructions manual of your Web Application Server for updating war files.

For Ex., if you are using Tomcat 4.1 as your application server, delete SASWarrantyAnalysis folder from <!TOMCATDIR>/webapps and clear <!TOMCATDIR>/work.

4. Follow this step if you are using WebLogic as your application server.
   a. Backup <!SASCONFIG>/Lev1/web/webapps/exploded/SASWarrantyAnalysis.war i.e., rename the folder to SASWarrantyAnalysis.war.01062009, where 01062009 is the date when the hot fix is applied.
   b. Copy <!SASHOME>/SASWarrantyAnalysis/4.1/MidTier/WebApp/SASWarrantyAnalysis to <!SASCONFIG>/Lev1/web/webapps/exploded/
   c. Rename the newly copied SASWarrantyAnalysis folder to SASWarrantyAnalysis.war
   d. Deploy <!SASCONFIG>/Lev1/web/webapps/exploded/SASWarrantyAnalysis.war in WebLogic.

Updating Client Tier:

Installing 41wrtyanlclnt04wn.exe:

The client component of the hot fix package is a self extracting executable named 41wrtyanlclnt04wn.exe. 41wrtyanlclnt04wn.exe should be copied to and installed on all client machines.

Launching the executable will initiate a Java install wizard, which will guide you through the extraction of the updated component(s).

41wrtyanlclnt04wn.exe Java installation file containing replacement files below:
        sas.analytics.mfg.warranty.app_4.1.0.jar
        sas.analytics.mfg.warranty.core.client_4.1.0.jar

To verify the installation of the hot fix confirm that the following file(s):
        sas.analytics.mfg.warranty.app_4.1.0.jar
        sas.analytics.mfg.warranty.core.client_4.1.0.jar

have been added in following locations indicated by the date provided:
<!SASHOME>\SASWarrantyAnalysis\4.1\Client\plugins
        Date: 09/10/09 (EST)

Updating SAS Server Tier:

Installing 41wrtyanlmva04hx.tar.Z:

The SAS Server Tier component of the fix package is a tar file named 41wrtyanlmva04hx.tar.Z. 41wrtyanlmva04hx.tar.Z should be copied to and installed on all SAS Warranty Analysis Server Tier machines.

The file contains the following replacement files:

sasmacr.sas7bcat
    the replacement catalog containing the hot fix in !SASROOT/cmacros/wrtyanlmva
cnfg_buildworldmaptable.sas
    the replacement catalog containing the hot fix in
    !SASROOT/misc/wrtyanlmva/install/configure

Perform the following steps on the SAS Server machine:

1. Copy the 41wrtyanlmva04hx.tar.Z to the /tmp/41warnty04hx directory on the SAS Server machine.

    NOTE: !SASROOT represents the directory where SAS 9.1.3 (9.1 TS1M3) is installed.
    For example:

    /appl/sas/SAS_9.1

2. (Optional) Back up the existing version of all the files before extracting the contents of this hot fix package.

3. Extract the contents of the hot fix package.

    $> cd /appl/sas/SAS_9.1

    $> uncompress -c /tmp/41warnty04hx/41wrtyanlmva04hx.tar.Z | tar -xf -

4. Update the installation history file. Use the following commands to execute the script that updates the hot fix install history file. You _must_ execute this script from the !SASROOT directory.

    $> cd /appl/sas/SAS_9.1

    $> install/admin/hotfix/hist_upd

SAS Tier Post-Installation Instructions:

1. ** **MANDATORY** ** Run the following script in an interactive SAS session on the server that contains the PARMSL library. This script will add a new column CONNECTSERVER to the parmsl.datasourceids_base table that will determine how a remote SPDS data mart will be accessed. The default value for this column is N, and hence, SAS sever will directly connect to the remote SPDS server without SAS/CONNECT. If you wish to use SAS/CONNECT, change the value of CONNECTSERVER to Y.

    ```
    libname parmsl ' '; /* Define parmsl libref */
    %let libname=parmsl;
    %let viewlibname=&libname;
    ```

```
proc sql noprint;
alter table &libname..DATASOURCEIDS_BASE
    add CONNECTSERVER  char(1) label='Y/N to use Connect Server
for Remote Datamart';

update &libname..DATASOURCEIDS_BASE
    set CONNECTSERVER="N";

create view &libname..DATASOURCEIDS as
    select a.DATASOURCEID,
           b.TEXT as NAME,
           a.DATASOURCEGROUP,
           a.LIBREF,
           a.LIBCONTENTTYPE,
           a.ENGINE,
           a.PATH,
           a.DATAPATHS,
           a.INDEXPATHS,
           a.SERVER,
           a.CONNECTPORT,
           a.SERVICEPORT,
           a.DOMAIN,
           a.USER,
           a.PASSWORD,
           a.CONNECTSERVER
    from &viewlibname..DATASOURCEIDS_BASE as a
        left join
        &viewlibname..DATASOURCEIDS_NLS as b
        on a.DATASOURCEID eq b.KEY and
            upcase(getpxlocale()) eq upcase(b.locale)
;
quit;
```

2. Execute the following steps if you would like to display Geographic Analysis results with the world map as the geographic area.

   a. Run the script cnfg_buildworldmaptable.sas in an interactive SAS session on the server that contains the PARMSL library to recreate the world map tables. This script can be found at !SASROOT/misc/wrtyanlmva/install/configure.

   b. Verify the following settings in the parmsl.analysisMacVars table:
      i. analysistype=GEOGRAPHIC macrovar=lowestArea macrostmt=state
      ii. analysistype=GEOGRAPHIC macrovar=mapHierarchy macrostmt=cont state segment

	ANALYSISTYPE	MACROVAR	MACROSTMT
199	GEOGRAPHIC	byVar	
194	GEOGRAPHIC	expChartType	CUMULATIVE
196	GEOGRAPHIC	findexpMeasurement	TRUE
201	GEOGRAPHIC	lowestArea	state
200	GEOGRAPHIC	mapHierarchy	country state segment
197	GEOGRAPHIC	maxByVar	20
198	GEOGRAPHIC	otherFormatLabelCriteria	TRUE
195	GEOGRAPHIC	uniqueValue	FALSE

c. Replace the settings in the parmsl.Screenattrsvalues_base table to:
   i. attrname=geographicarea value=parmsl.proj_world

	ATTRNAME	ORDER	VALUE	ATTRCRITERIA
194	geographicarea	10	parmsl.proj_world	

d. Replace the settings in the parmsl.Screenattrsvalues_nls table to:
   i. locale=en_US key=geographicarea10 text=World

	LOCALE	KEY	LINENO	TEXT
99	en_US	geographicarea10	1	World

For other locales, the TEXT column should contain the translation of 'World' in Unicode escape sequence (\uxxxxx). Unicode escape codes can be generated using the SAS function *unicodec*.

3. If SAS Warranty Analysis 4.1 is configured to support multiple currencies, insure that the SAS_FORMAT column in the parmsl.exchange_rates_info_base table contains a valid SAS format such as NLMNYw.d (national language monetary) formats.

	CURRENCY_CD	SAS_FORMAT
1	GBP	NLMNLGBP32.2
2	INR	NLMNLINR32.2
3	SEK	NLMNLSEK32.2
4	USD	NLMNLUSD32.2

4. Mid-tier data caching was introduced in SAS Warranty Analysis Hot Fix 03 for performance improvement. Changes made to tables in the PARMSL library require clearing of memory cache. This can be done in the Diagnostic Client by selecting the link under Memory Cache Size (K) or the Cache View link, and selecting Clear.

This completes the installation of hotfix 41WARNTY04 on HPUX FOR ITANIUM.
